Ygl is a leading Business Solution Provider specialized in certain niche vertical industries in Asia Pacific, with products and services backed by strong domain expertise. Ygl operates from more than 8 regional offices spreading across Malaysia, Singapore, Thailand, Hong Kong and China, with more than 120 professionals comprising advisors, trainers, consultants, analysts and programmers.

Ygl was granted MSC status in Malaysia in 2004 and has won numerous awards in Asia Pacific region. Ygl's deep industry specialization covers Manufacturing, Hospitality, Library, Property Management, Healthcare, Human Resource, International Procurement, Wholesale & Distribution, Taxation, Application Performance & Security and Data Warehousing.

Independently recognized as a global leader in domain-centered solutions, Ygl provides an array of innovative products and services allowing customers, business partners and suppliers to collaborate online, reduce costs and decrease time-to-market. These high performance supply chains enable the businesses to take in the synergies arising out of Real Time Enterprise collaboration while providing timely inputs to customers to help them seize new business opportunities.

“Becoming certified in these information security practices adds that extra value that can place our organizations ahead of our counterparts and/or competition. IT security is extremely important, regular compliance and security audits conducted for all our engagements have demonstrated Ygl’s readiness and commitment to meet these requirements. Achieving ISO 27001:2005 certification is another way to recognize the level of security we provide to our clients, and the maturity of our business processes. This certification extends the foundation we’ve built by also achieving Level 3 CMMI quality certification.”

CEO, Mr. Yeap Kong Chean,
Ygl Convergence Bhd

Ygl combines its domain expertise and leading edge technology to enable companies across industry verticals to achieve business efficiencies. Ygl's competitive advantage is its domain expertise, product innovation, global reach, and long track record of successes.

Ygl reached a new milestone in its rapid growth by becoming one of the first Malaysian software companies to secure the ISO 27001 certification.

“Concerns about security is cited as one of the greatest hurdles to implementing SaaS. As Ygl is providing SaaS services it is increasingly important to our customer base therefore obtaining ISO 27001:2005 certification is a critical. Thus in order to succeed and survive in an increasingly competitive market Ygl has invested significant resources to develop, maintain and enhance policies that ensure physical and IT security for our clients by obtaining ISO27001 thus is able to maintain stringent security measures in place to safeguard our customer data.

IT Director Mr. Tsang Yi Yin,
Ygl Convergence (HK) Limited

The achievement was one of Ygl management's goals to take lead in achieving the global standards and taking adequate security measures to protect information assets. ISO 27001 specifies the requirements for establishing, implementing, operating, monitoring, reviewing, maintaining and improving a documented Information Security Management System within the context of the organisation's overall business risks.

ISO 27001 is the international standard developed exclusively for Information Security Management Systems (ISMS), requiring companies to employ a methodical approach to managing sensitive information and ensuring data security. The standard comprises ten exhaustive control categories including organisation of information security, access controls, physical and environmental security, asset management, business continuity management, communications and operations management.

Our mission is to develop, customise, package, promote and finally deliver innovative software solutions, which are beneficial to academic institutions, government-funded organisations, corporate businesses and public at large.

There are three elements that are important to Ygl. Firstly is to build a strong, professional company. This can only be achieved by attracting and retaining a talented and committed management team that shares in Ygl's vision. Second is to build solid products for the vertical industries that Ygl focuses on, and this can only be achieved through the continual effort on the Research & Development side. Last but not least, is to establish Ygl as a regional brand. This can be achieved only through creating software where Ygl owns the intellectual property and having a world-class standard execution team.
